"the fume cupboard and air curtain specialists"

EXPERIENCE COUNTS

Conditionaire International Pty Limited has fully earned its respected position, in the area of laboratory fume exhaust equipment, by recognising the fundamental and practical requirements of that field.

In 1957 Conditionaire introduced to the Australian market the first standard laboratory fume cupboards and fume exhaust fans. Since then there has been continual and considerable experimental research and field experience gained, with the result that a vast knowledge of the problems and solutions associated with this equipment has been accumulated.

Founded on the knowledge that there is no short cut to solid achievement, Conditionaire has established its place in the industry by a conscientious and creative development of the basic fundamentals which have the most immediate influence on the decisions of those responsible for buying the product or service. Those fundamental considerations are:

Experience, Research, Quality, Reliability, Competitiveness and Service.

Conditionaire offers a complete service from design to commissioning stages and we can study your individual problems and work closely with those responsible for planning, equipping and operating your laboratory. We are also able to inspect existing systems, submit recommendations and carry out upgrading, if necessary.

Conditionaire holds NATA registration, number 2433, in the field of Mechanical Testing, specifically for the testing of laboratory fume cupboards to standard AS2243-8. We offer this service for our systems and those manufactured by others.

Our standard range of fume exhaust products includes:

- Fume Cupboards
- Fume Exhaust Fans
- Fume Scrubbers
- Fume Proof Duct
- Chemical Storage Cabinets
- Support Benches
- Laboratory Tap Ware
- NATA Certification

This section primarily deals with fume exhaust equipment used in laboratories but in no way is it intended to fully cover the many individual and specialised requirements.

Refer to our Sales Engineering Department for your complete solution.
